

## **Farm Supplies Central**

Are you a problem solver who likes thinking on their feet and helping rural clients with pumps, milking machines and irrigation systems? Join a diverse team of technicians and engineers to acquire on the job training and apply your knowledge to future roles at Farm Supplies. The company offers a wide range of training opportunities to the successful applicant.

### **Job Summary**

Farm Supplies Central are looking for a Pump & Milking Machine Engineer to help us service our wide range of rural and farm clients.

### **Key Responsibilities**

- Installation and maintenance of milking systems
- Construction and maintenance of milking platforms and backing gates
- Diagnostics, installation and repair of pumping systems
- General design, fabrication and installation
- Job management

### **Core skills**

- Great people skills and management
- Excellent record keeping
- Experience in milking, pumps, and working toward proficiency in the plumbing or electrical industry
- Welding – mild steel, arc, stainless steel, tig
- Mechanical diagnostic and solution finding

### **Personal Attributes**

- Strong communication and time management
- High attention to detail
- Mechanical aptitude with a desire to upskill
- Physically fit
- Clean and tidy
- Excellent customer service attitude

As many of our clients are from the farming industry, a background or strong interest in the rural sector would be an advantage.

Wages will be commensurate with skills achieved. This role will appeal to the self-starter with a clean driver's licence and strong understanding of health and safety practices. After a training period you must be available to work on a rotating "on-call" roster.
